

IGOR VASIC

Front-End Developer | Angular, Vue & TypeScript

Belgrade, Serbia | [+381 65 222 88 68](tel:+381652228868) | vasicigorjsp@gmail.com | vasicigor.dev | [LinkedIn](#)

PROFESSIONAL SUMMARY

Front-End Developer focused on building responsive, maintainable and component-based user interfaces for business applications and client projects. Core experience includes Angular, TypeScript, Vue and JavaScript, turning Figma designs, Jira tasks and project requirements into reliable, production-ready front-end solutions.

Work includes reusable UI components, responsive layouts, REST API integrations, RxJS data flows, complex UI workflows, real-time status flows, dashboards, map-based reporting, existing codebase improvements, WordPress customization and website maintenance.

TECHNICAL SKILLS

Frontend: Angular, TypeScript, Vue, JavaScript, HTML5, CSS3, SCSS

UI / Components: Responsive Web Design, reusable components, PrimeNG, Vuetify, component-based UI

State / Data Flow: RxJS, Pinia, Vuex, asynchronous data handling

APIs / Integrations: REST APIs, Firebase

Workflow / Tools: Git, GitHub, Jira, Figma, Agile/Scrum, QA and backend collaboration

CMS / Maintenance: WordPress customization, existing codebase improvements and website maintenance

AI-assisted workflow: GitHub Copilot, Codex and ChatGPT

PROFESSIONAL EXPERIENCE

Front-End Developer | Protektis D.O.O. | Belgrade | Oct 2024 - May 2026

Project: Confidential Emergency Operations Platform — NDA-covered enterprise application

- Built and maintained Angular/TypeScript features for the Confidential Emergency Operations Platform, an NDA-covered enterprise application used for emergency response workflows involving floods, earthquakes and fires.
- Developed complex workflows for alarm station control, live incident monitoring, map-based reporting, equipment assignment and operational status tracking.
- Integrated REST APIs, handled asynchronous data flows with RxJS, and implemented responsive UI components using PrimeNG and Figma-based designs.
- Worked closely with backend developers and QA to improve feature stability, usability and overall application reliability.

Tech stack: Angular, TypeScript, RxJS, PrimeNG, HTML5, SCSS, REST APIs, Git, Jira, Figma

Front-End Developer | The Anemone | Belgrade | Mar 2023 - Jul 2023

Project type: Vue-based client web projects

- Built and maintained Vue-based interfaces and reusable front-end components for responsive web projects.
- Worked on page layouts, UI sections, component behavior, bug fixes and client-requested changes within existing codebases.
- Improved layout consistency, responsive behavior and front-end reliability across desktop, tablet and mobile views.
- Delivered clean, maintainable interfaces based on visual and functional requirements.

Tech stack: Vue, JavaScript, HTML5, CSS, jQuery, Responsive Web Design

Front-End Developer | Goxee | Belgrade | Oct 2021 - Feb 2023 | goxeedealer.com

Project type: Automotive web platform / dealership website generator

- Built and maintained front-end interfaces for an automotive web platform focused on dealership website generation and customization.
- Worked on reusable themes, UI sections, page layouts and client-specific customizations used across multiple dealership websites.
- Improved visual consistency, responsive behavior and maintainability of shared front-end patterns across desktop, tablet and mobile views.
- Delivered front-end updates based on brand requirements, platform structure and client-specific business needs.

Tech stack: Vue, JavaScript, HTML5, CSS, jQuery, Responsive Web Design

Freelance Front-End Developer | Belgrade / Remote | Feb 2020 - Present

- Worked on selected freelance and client projects alongside company roles, mainly focused on Angular/Vue interfaces, responsive UI improvements, Firebase integration, front-end fixes and ongoing maintenance.
- Contributed to long-term project work, including reusable UI sections, client-requested updates, existing codebase improvements and maintainable front-end changes based on project requirements.

Tech stack: Angular, TypeScript, Vue, JavaScript, HTML5, CSS, SCSS, Firebase, MySQL, Responsive Web Design

SELECTED PROJECTS

Confidential Emergency Operations Platform | Enterprise Angular Application / NDA Case Study

- Internal Angular application for operational workflows, user permissions, map-based data and notification-driven screens.
- Implemented complex Angular features involving multi-step workflows, reactive forms, role-based UI behavior, REST API integration, loading/error states, status-driven updates and map-based data screens.
- Improved the usability of data-heavy operational screens by adding clearer UI states, structured workflows and easier access to important status and location information.

Tech stack: Angular, TypeScript, RxJS, Reactive Forms, Angular Router, REST APIs, PrimeNG

Jobatory | SaaS CRM Platform | jobatory.com

- Long-term Angular/TypeScript SaaS platform for service businesses in the waste pickup and bin cleaning industry.
- Worked on customer, client and admin interfaces, including booking flows, customer account screens, business dashboards and operational views.
- Converted Figma designs into responsive production-ready UI, integrated REST APIs, handled RxJS data flows and supported map-based service location and route views.
- Supported production application maintenance through responsive UI improvements, front-end updates and collaboration with product/backend teams.

Tech stack: Angular, TypeScript, RxJS, HTML5, SCSS, REST APIs, Git, Jira, Figma

The Success Plan | Vue Feature Development | thesuccessplan.com

- Client-facing Vue web application with public website available and private source code.
- Added and improved Vue front-end features, adjusted component behavior, refined layouts and worked with custom SCSS inside an existing codebase.
- Delivered maintainable UI updates aligned with the existing codebase, visual requirements and responsive behavior.

Tech stack: Vue, JavaScript, HTML5, SCSS, Responsive Web Design

Selected WordPress Client Websites | Front-End / WordPress Developer

- Built and maintained WordPress websites, implemented responsive pages, adjusted layouts, configured plugins and handled ongoing front-end/content updates.
- Projects: [Sustainable Development Forum](#), [Ivan Stapić](#), [Videl](#), [Bavaria Rental](#).
- Delivered responsive and maintainable WordPress websites with clear content structure, improved mobile behavior and practical client-side editing support.

Tech stack: WordPress, HTML5, CSS, JavaScript, Responsive Web Design, Plugin Configuration, Website Maintenance

EARLY FRONT-END PROJECTS & INTERNSHIP

Mile Development, Gvisp and Enon Solutions internship

- Worked on early front-end projects involving Vue/Vuetify codebase improvements, mobile-first SPA development, authentication flows, CRUD functionality, product listings and responsive layouts.
- Completed a full-stack internship project focused on a recipe application using Vue and MySQL.

Tech stack: Vue, Vuex, Vuetify, Meteor, JavaScript, HTML5, CSS, MySQL, Responsive Web Design

ADDITIONAL BACKGROUND

Earlier experience includes desktop business application development with Borland Delphi, followed by professional background in business ownership, logistics, warehouse operations, team coordination and customer communication. This background strengthened organization, responsibility, practical problem-solving and communication skills.

Roles: Borland Delphi Programmer, Business Owner, Warehouse Manager, Truck Route Coordinator
